## **Notification of Statistically Significant Levels Above Groundwater Protection Standards – January 2023 Groundwater Sampling Event**

Pursuant to 40 CFR 257.95(g), if one or more constituents in appendix IV to this part are detected at statistically significant levels above the groundwater protection standard established under paragraph (h) of this section in any sampling event, the owner or operator must prepare a notification identifying the constituents in appendix IV to this part that have exceeded the groundwater protection standard. The owner or operator has completed the notification when the notification is placed in the facility's operating record as required by § 257.105(h)(8).

The January 2023 groundwater sampling event was conducted on January 27, 2023. Laboratory analysis of the groundwater samples was completed on March 10, 2023. A statistical comparison to the analytical results to the Groundwater Protection Standards was completed on March 27, 2023. In accordance with the established groundwater monitoring program for the facility, confirmation sampling may be conducted within 90 days of the observation of a Statistically Significant Increase or Statistically Significant Level. . This aids in preventing false positives and prematurely implementing an assessment monitoring program, assessment of corrective measures or alternate source demonstration.

Confirmation sampling was completed on April 13, 2023. Laboratory analysis of the confirmation samples was completed on May 24, 2023. Statistical comparison of the confirmation samples was completed on May 24, 2023.

The following Appendix IV constituent was confirmed at statistically significant levels above the applicable groundwater protection standards during the January 2023 assessment monitoring completed at City Water, Light and Power's Dallman and Lakeside coal combustion residual surface impoundments:

- Arsenic
